

Hitesh Rohra

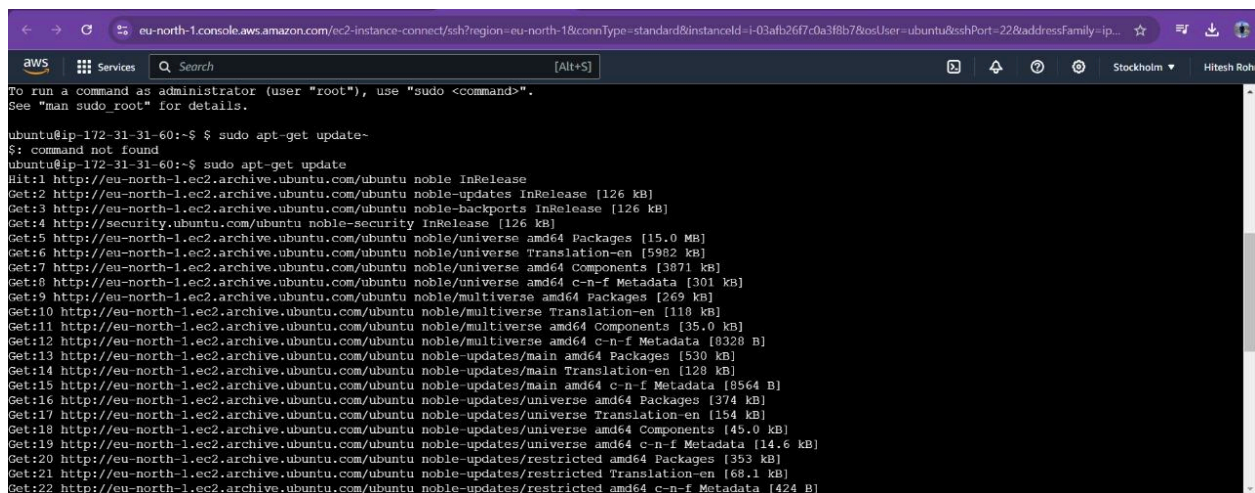

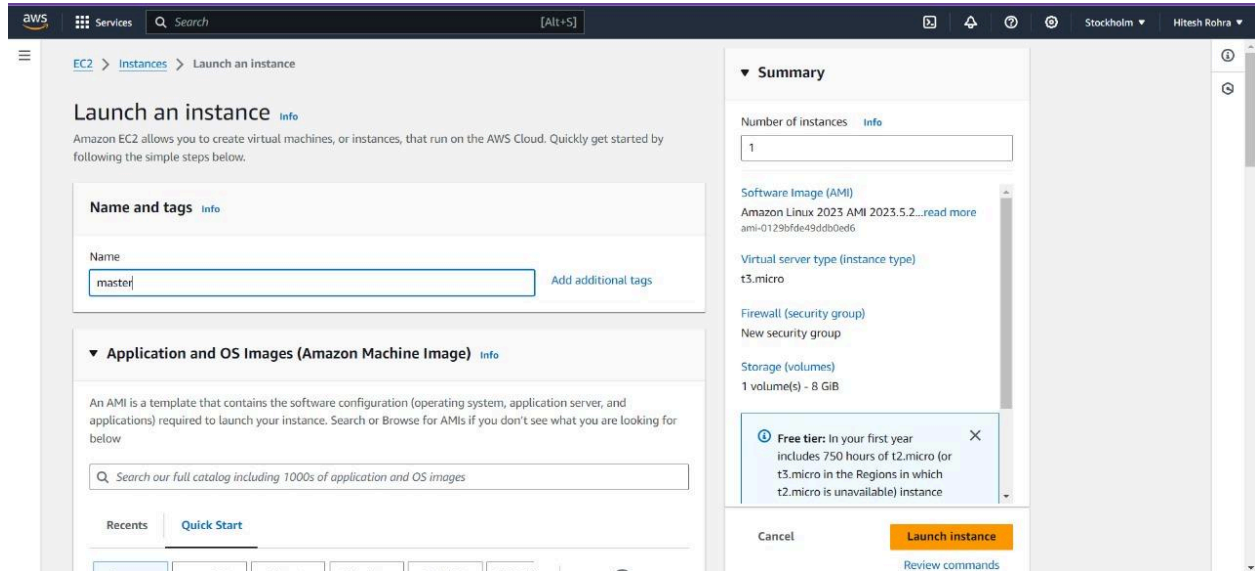

## Experiment 3

D15A 47

**AIM:** To understand the Kubernetes Cluster Architecture, install and Spin Up a Kubernetes Cluster on Linux Machines/Cloud Platforms.

### Step 1: Prerequisites

1.1 Create 3 EC2 instances, one for the master node and two for the worker nodes.

1.2 Proceed with the following settings and create a new key pair as follows (use the same key pair for all the three nodes)

aws

Services

Search

[Alt+S]

Mumbai

Atharva

Name and tags

Name

master

Add additional tags

Application and OS Images (Amazon Machine Image)

An AMI is a template that contains the software configuration (operating system, application server, and applications) required to launch your instance. Search or Browse for AMIs if you don't see what you are looking for below

Search our full catalog including 1000s of application and OS images

Quick Start

Amazon Linux

macOS

Ubuntu

Windows

Red Hat

SUSE Li

Browse more AMIs

Amazon Machine Image (AMI)

Ubuntu Server 24.04 LTS (HVM), SSD Volume Type

ami-0522ab6e1ddc7055 (64-bit x86) / ami-0000791ba0666ad5 (64-bit Arm)

Virtualization: hvm ENA enabled: true Root device type: ebs

Free tier eligible

Summary

Number of instances

Software Image (AMI)

Canonical, Ubuntu, 24.04, amd64...read more

ami-0522ab6e1ddc7055

Virtual server type (instance type)

t2.micro

Firewall (security group)

New security group

Storage (volumes)

1 volume(s) - 8 GiB

Free tier: In your first year includes 750 hours of t2.micro (or t3.micro in the Regions in which t2.micro is unavailable) instance usage on free tier AMIs per month, 750 hours of public IPv4 address usage per month

Cancel

Launch instance

Create key pair

Key pair name

Key pairs allow you to connect to your instance securely.

three-tier-app

The name can include up to 255 ASCII characters. It can't include leading or trailing spaces.

Key pair type

☒ RSA

RSA encrypted private and public key pair

☐ ED25519

ED25519 encrypted private and public key pair

Private key file format

☒ .pem

For use with OpenSSH

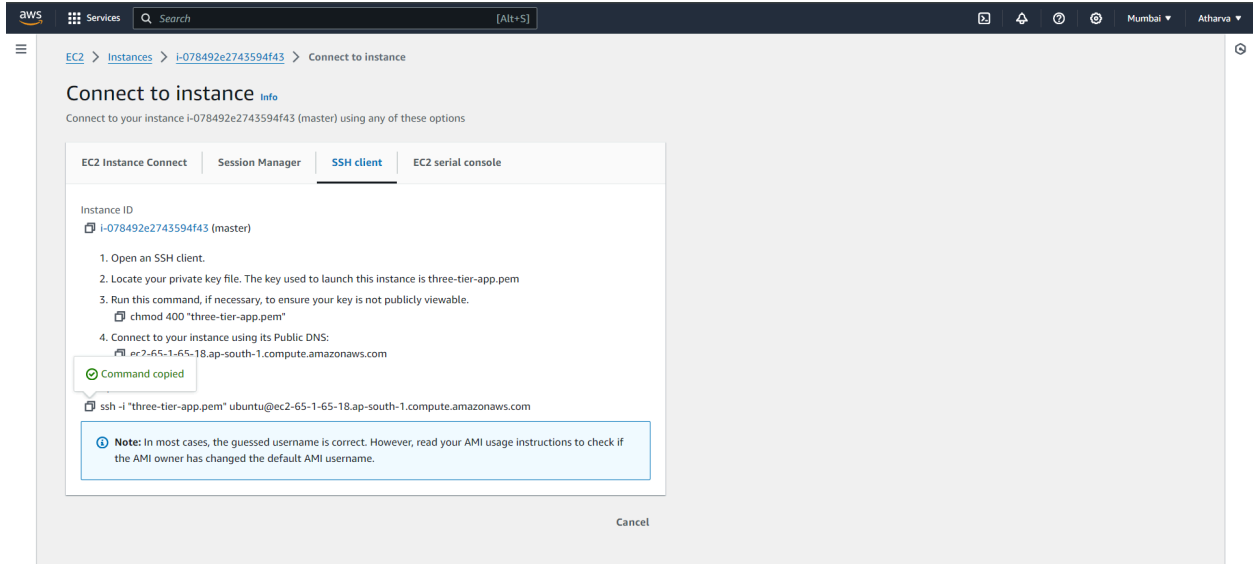

☐ .ppk

For use with PuTTY

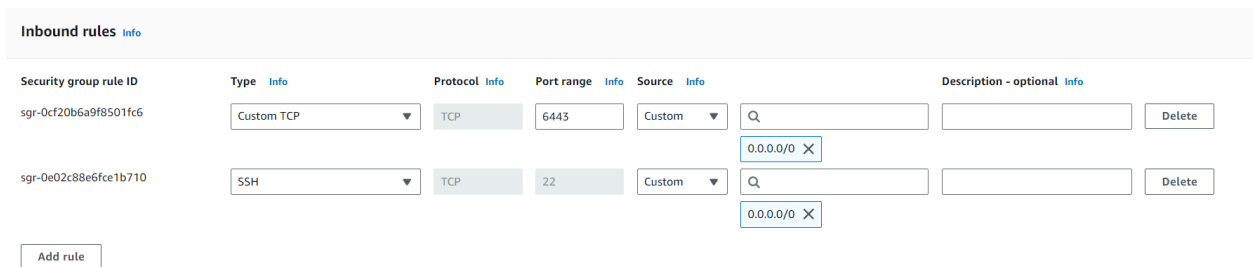

When prompted, store the private key in a secure and accessible location on your computer. You will need it later to connect to your instance. [Learn more](#)

Cancel

Create key pair

## 1.3 Add port 6443 in each security group

**1.4** After the instances have been created, copy the text given in the example part of each of the three instances into git bash.

```

```

You will get kubeadm token, Copy it.

**Step 4:** Run the above command only on worker nodes

sudo kubeadm reset pre-flight checks

sudo your-token --v=5

```
ubuntu@ip-172-31-36-212:~$ sudo kubeadm reset pre-flight checks
W0921 11:14:17.713660 3933 preflight.go:56] [reset] WARNING: Changes made to this host by 'kubeadm init' or 'kubeadm join' will be reverted.
[reset] Are you sure you want to proceed? [y/N]: yes
[preFlight] Running pre-flight checks
W0921 11:14:20.535200 3933 removeetcdmember.go:106] [reset] No kubeadm config, using etcd pod spec to get data directory
[reset] Deleted contents of the etcd data directory: /var/lib/etcd
[reset] Stopping the kubelet service
[reset] Unmounting mounted directories in "/var/lib/kubelet"
[reset] Deleting contents of directories: [/etc/kubernetes/manifests /var/lib/kubelet /etc/kubernetes/pki]
[reset] Deleting files: [/etc/kubernetes/admin.conf /etc/kubernetes/super-admin.conf /etc/kubernetes/kubelet.conf /etc/kubernetes/bootstrap-kubelet.conf /etc/kubernetes/controller-manager.conf /etc/kubernetes/scheduler.conf]

The reset process does not clean CNI configuration. To do so, you must remove /etc/cni/net.d

The reset process does not reset or clean up iptables rules or IPVS tables.
If you wish to reset iptables, you must do so manually by using the "iptables" command.

If your cluster was setup to utilize IPVS, run ipvsadm --clear (or similar)
to reset your system's IPVS tables.

The reset process does not clean your kubeconfig files and you must remove them manually.
```

```
